## DETAILED ACTION

### *Drawings*

1. Figure 5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 11, 13, and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Albrecht et al (5,654,881).

Albrecht et al discloses a power converter for delivering power to a load, comprising: a single stage buck-boost converter (10) for converting a rectified input signal; a switching output stage (10b) for converting the DC signal to a switched signal delivered to the load; and a controller (22) coupled to the buck-boost converter and the output stage for controlling the buck-boost converter and the output stage; wherein the buck-boost converter includes a switch (18-1, 18-2) driven by the controller; drive signals (G1, G2) provided from the controller to the

Art Unit: 2838

switch, the drive signals being operable to switch the switch to draw an input current substantially in phase (see figure 2) with an input voltage; a feedback signal (22a) from the buck-boost converter to the controller for contributing to determining when the switched is switched. "For power factor correction applications, this push-pull converter, by transitioning between the Boost and Buck operating modes, is able to shape the input current."

*Claim Rejections - 35 USC § 103*

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 8, 14, and 19-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Albrecht et al (5,654,881) in view of the acknowledged prior art.

Albrecht et al discloses the invention substantially as claimed but does not disclose a switching full-bridge, an HID lamp, an integrated circuit, and a power factor correction circuit.

Art Unit: 2838

The acknowledged prior art clearly teaches that use of such features is well known in the art (see Background of the Invention section and figure 5 which show all features). Therefore, it would have been obvious to one having ordinary skill in the art to employ such features in Albrecht et al, as taught by the acknowledged prior art, to obtain the claimed invention for the purpose of attaining a high efficiency.

*Allowable Subject Matter*

7. Claims 15-18 are allowed.
8. Claims 4-7, 9, 10, and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
9. The following is an examiner's statement of reasons for allowance:

Claim 15 recites, inter alia, a diode coupled to the switch and the inductor for directing current from the switch to the inductor when the diode is not conducting; and a capacitor coupled to the diode and the inductor for storing energy supplied by the inductor when the diode is conducting, the capacitor supplying an output of the buck-boost converter.

The art of record does not disclose the above limitations, nor would it be obvious to modify the art of record so as to include either of the above limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
